

Information on use

These labels have been developed for use with laser printers, copiers and inkjet printers and have been made with utmost care. They are also suitable for use with most colour copiers and laser colour printers which can print materials of more than 140 g/m². Please refer to the instructions in your printer manual.

Important: Information on processing

1. Follow the recommendations of the machine manufacturer (e.g. insert sheets individually or by means of the paper cassette).
2. Sheets of labels should be used only once. Sheets from which some labels have been removed may cause problems if passed through the machine a second time.
3. If only a portion of the pack is used, replace the rest in the pack. Ideal storage conditions: room temperature approx. 20°C, relative humidity 50%. Avoid pronounced fluctuations in these conditions.
4. If you are using these labels with an inkjet printer, please carry out a test to determine the best printing mode for your machine in each case (e.g. paper type, resolution).
5. With laser printing we recommend the use of the “thick paper”, “heavy materials” or “labels” option (or equivalent) in the print driver settings or at the printer control panel.
